

ABSTRACT

A sheet package 9 in accordance with the present invention includes sheets 7 as print mediums for a printer and a package member 8 surrounding the sheets 7 which have been stacked up. 5 The sheet package 9 is configured so that the sheets 7 can be set in the printer together with the package member 8 exposing part of the sheets 7. The package member 8 is integrally provided with a flap part 44 which can expose part of the sheets 7 by 10 being opened when the sheet package 9 is set in the printer and cover the exposed part of the sheets 7 by being closed when the sheet package 9 is not used.
